Team Details

Project: LingoLive — Understand. Reply. Keep going.

Team name: CreativeEngine

Team leader: Ashish T. Vasant | Member: Janhvi Singh

Problem: Help migrants participate in everyday conversations in an unfamiliar language.

Theme: Sustainability & Social Impact | Category: Accessibility

Brief about the idea

A conversation assistant for life in a new place.

LingoLive listens to another person, explains their words and offers three useful replies in the local language, with pronunciation. Plans, recent turns and location-linked memory make those replies personal.

Understand now

Live speech → familiar-language meaning

Reply confidently

Relevant options + pronunciation

Learn afterwards

Saved exchanges → personal practice

Opportunities

The problem: understanding is only half the conversation

A newcomer must also decide what to say, pronounce it and complete a task while the other person waits.

The solution: replies that fit the person and the moment

Combines the current turn, a pre-task plan, activities, preferences and nearby saved-place notes. Learner readbacks update context.

Users and customers across regions

Newcomers in India, Germany, Japan and beyond. Customers: migrant groups, NGOs, universities, employers and relocation teams.

List of features offered by the solution

Hear and respond
Live multilingual speech; three contextual replies.

Say it your way
Express familiar-language intent in the local language.

Recognize learner readbacks
Forgiving repeat matching + session voice estimates.

Plan before leaving
Cab → optional tea → station; Done / Skip / Previous.

Location-linked memory
Opt-in place facts recalled on a fresh return nearby.

Personal memory
Editable activities and preferences; relevant retrieval.

Learn afterwards
Saved exchanges; word bubbles and pronunciation.

Simple, guarded access
One large microphone control; Google sign-in; quotas.

Process flow diagram or Use-case diagram

1. Plan + listen

Optional goal; one large microphone button

→

2. Understand

Live Transcribe produces committed speech

→

3. Route the turn

Readback matching + recent voice clues

Learner repeats a suggested reply

Keep the actual spoken words in context and preserve the options. Continue listening for the other person.

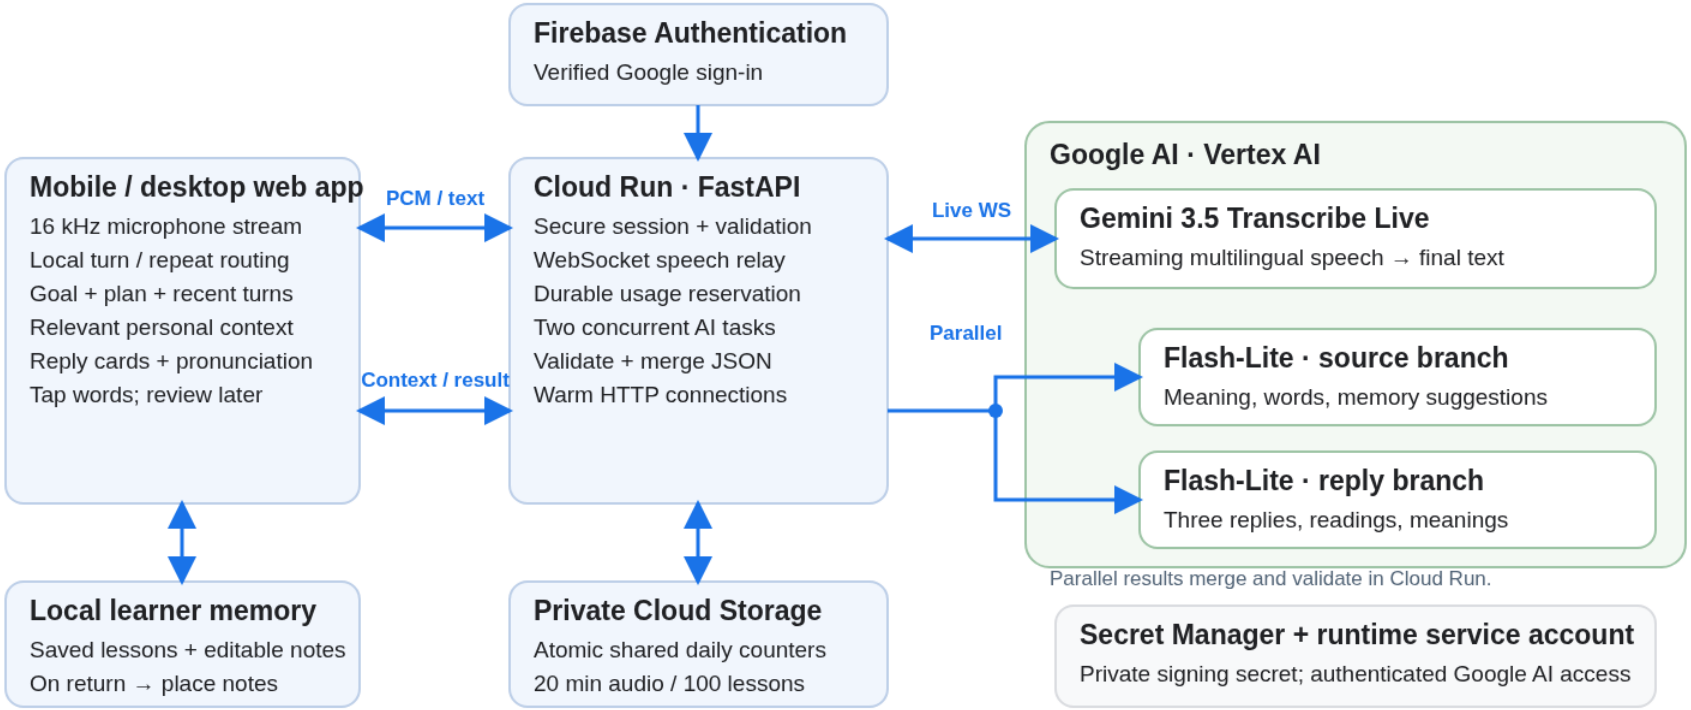

A new turn needs assistance

Parallel Flash-Lite tasks → meaning + three replies → learner speaks → Saved review afterwards.

The learner can correct who spoke. Goals, plan progress and relevant place memories follow the conversation.

Wireframes/Mock diagrams of the proposed solution (optional)

Architecture diagram of the proposed solution

Technologies to be used in the solution

Live speech

Gemini 3.5 Transcribe Live streams multilingual audio while the person speaks.

Fast, economical replies

Two concurrent Gemini 3.1 Flash-Lite tasks: source understanding and reply generation; compact JSON.

Google Cloud

Cloud Run + Vertex AI; Firebase Google sign-in; private Cloud Storage quotas; Secret Manager.

Local personalization

IndexedDB lessons; editable learner profiles, task plans and guarded location-linked memory.

Estimated implementation cost (optional)

Starter · US$5 / month

120 listening minutes + 240 new reply turns; occasional everyday help.

Plus · US$20 / month

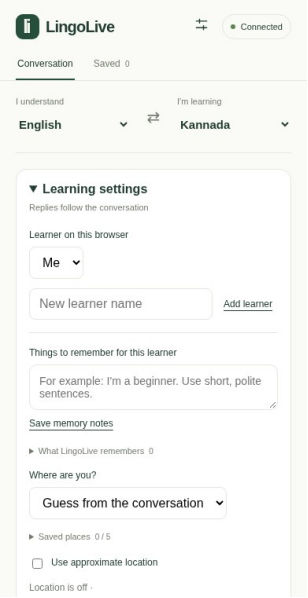

600 listening minutes + 1,200 new turns; frequent work and daily use.

Proposed subscriptions share the same core features. Estimated full-use operating expense: Starter US$2.91; Plus US$13.48 per member/month, including contingency.

Both include contextual replies, pronunciation, plans, location-linked memory and saved learning. Plus offers five times the usage. Organizations can sponsor members or arrange group packages.

Expense assumptions: 8,000 input / 1,600 output tokens across both calls per turn; shared hosting across 100 members; 20% contingency. Live speech $0.008925/min; Flash-Lite $0.25/M input and $1.50/M output. Detailed rates and assumptions: technical PDF.

Snapshots of the prototype

Plan before leaving

Find a useful reply

Learn afterwards

Recorded prototype UI; Saved view uses sample lesson data. The demonstration includes real Google AI responses.

Prototype Performance report/Benchmarking

Designed for an approximately two-second warm lesson.

1.79 s mean · 10 lessons	Recorded v1.5 warm hosted run; all complete responses succeeded.
2.065 s mean · 4 cases	Later v1.9 Kannada task flows: cab, tea, café and station.
Parallel critical path	Source understanding and replies run together; compact output and warm HTTP.
Local reuse	Readbacks preserve replies; word taps and saved review reuse lesson data.
Memory and access checks	134 backend tests; 16 place-core checks and 8 place browser flows.

Timings measure warm lesson requests; speech also includes transcription finalization and device/network time.

Additional Details/Future Development (if any)

Proposed plans and growth

Starter US$5; Plus US$20 per month.

Community and employer-sponsored packages.

20 partners × 100 learners = 2,000 learners.

Illustrative 80% Starter / 20% Plus mix: US$16,000 monthly revenue.

International rollout

Germany: German for transport, shopping, rental conversations and work.

Japan: Japanese replies and Latin-script pronunciation for daily encounters.

Language-pair review, local examples and migrant-community partnerships.

Prices and expansion are commercial proposals; revenue and expenses are scenario estimates. German and Japanese are already selectable.
